

21 VOID TECHNOLOGIES

USER OPERATIONAL MANUAL

Fusing Technology With Market Intelligence • Official System Documentation

1. System Overview & Native Desktop App Interface

Welcome to the 21 Void Technologies Record Keeping & Inventory System. This system is designed as a fast, offline-first application that feels and responds like a modern native desktop tool.

- **Non-scrolling Viewport:** The main application window has a fixed desktop viewport. Navigation and toolbars remain anchored while only inner tables and content panels scroll smoothly.
- **Fixed Sidebar:** Access all core features anytime from the left navigation bar (Dashboard, Products / Inventory, Sales, POS Checkout, Customers, Reports, and Settings).
- **Live Clock & Dark Mode:** The sticky topbar displays a real-time calendar clock and an instant Dark/Light mode toggle that saves your preference automatically.
- **Touch & Mouse Driven:** Every interaction is 100% mouse and touch operated. There are no confusing keyboard shortcuts or hotkeys to memorize.

2. Inventory Management & Physical Stock Tracking

The inventory tracks items individually by unique serial number. Unlike generic quantity stores, every row represents a physical piece of hardware in stock.

- **Adding New Stock:** Click '+ Add Product' to open the slide-up modal. Enter the Product Name, Category, Serial Number, Account Number, Date Received, and Cost Price (Amount Bought).
- **Statuses:** Each item transitions cleanly between 'In Stock', 'Sold', 'Low Stock', and 'Returned'.
- **Real-Time Search:** Type in the search bar on the Inventory screen to immediately filter by product name, serial number, or account number with live skeleton loaders.

3. Point-of-Sale (POS) Checkout & Instant PDF Receipts

The dedicated POS Checkout screen (/sales/checkout/) allows staff to complete customer purchases in seconds.

- **Select Product:** Choose any available 'In Stock' product. The system automatically populates the selling price and item specifications.
- **Customer Selection:** Select an existing client or click '+ New Customer' to register a new customer profile without leaving the screen.
- **Payment Method:** Select Cash (USD), Bank Transfer / ZIPIT, EcoCash, or Card.
- **Instant Branded Receipt:** Immediately upon clicking 'Complete Sale & Checkout', a SweetAlert2 confirmation gives you a one-click button to print or download a high-resolution PDF receipt formatted with your company logo, contact details, serial numbers, and warranty terms.

4. Sales History & Customer Ledger

Track every completed transaction from the Sales module.

- Profit Tracking: The system automatically calculates gross profit by subtracting the item's purchase cost from the selling price.
- Automatic Reversion: If a sale was entered in error, an administrator can void the sale, which automatically returns the physical item back to 'In Stock' status.
- Customer Directory: Review each customer's lifetime purchase history and total orders.

5. Reports, Financial Analytics & Offline Exports

Generate executive reports with customizable time filters (Today, 7 Days, 30 Days, 1 Year, or Custom).

- Excel Exports (.xlsx): Download complete sales records and current inventory valuation tables with auto-calculated totals and formatted currency cells.
- PDF Reports (.pdf): Generate landscape executive summary documents ready for print and management review.
